

The Impact of Climate Change on Insects

**A lecture by Dr Richard Harrington,
Wednesday 10th June 2026, 6.00pm – 7.00pm**

(Tea and coffee served from 5.45pm)

Lillingstone Trust Community Laboratory

Discovery Centre, Royal Latin School, Buckingham, MK18 1AX

This lecture explores how climate change is reshaping the lives of insects — not just the pests that threaten crops, but also the beneficial species we rely on and those now at risk of disappearing altogether. With a particular focus on insects of conservation concern and pest species, it draws on decades of research led by Dr Harrington during his time heading the Rothamsted Insect Survey, one of the world's longest-running insect monitoring programmes.

Although now retired, Dr Harrington remains deeply involved in entomology, contributing his expertise through voluntary roles with the Royal Entomological Society, the National Trust, and Butterfly Conservation.

Entry to these talks is free to all members of the local community. For further details, or to book a seat, please visit www.royallatin.org/lillingstone-lectures
